

ESTESIL™ H₂TOP
is a line of addition reaction impression materials in polyvinylsiloxane with highly wettable surfactant hydrophilic fillers.
It is available in different formulations and viscosities to meet the requirements of the main impression taking techniques.

WARNING: for dentistry usage only.

COMPOSITION

Base: mixture of polyvinylsiloxane, polyvinylsiloxane terminal - H, inert fillers and color pigments
Catalyst: mixture of polyvinylsiloxane, inert fillers and patented platinum complex

STORAGE

An improper and inadequate storage may negatively affect the product characteristics causing its malfunctioning, or it may decrease its shelf life.
The product packages must be stored away from heat sources, in a dry place with temperature ranging from 10°C/50°F to 24°C/75°F.
Do not freeze the product packages.
Do not use after the expiry date.

SUGGESTION FOR THE IMPRESSION MATERIALS MATCHING:

TYPE	COLOR	CODE	SUGGESTIONS FOR USE
H Heavy	OCHRE	E	E+F: precision impression for supragingival or iuxta gingival preparations in the dual phase technique.
HF High Flowability	BLUE	F	B+F or Δ+F or E+F: precision impression for supragingival or iuxta gingival preparations.
EHF Extra High Flowability	PINK	H	B+H o Δ+H: precision impression for subgingival reading.
PUTTY SOFT	YELLOW	B	Base for dual phase impression with two viscosities (putty-wash technique).
MONOPHASE DELTA	ACID GREEN	Δ	Base for simultaneous impression with two viscosities for: Dual Arch, Implant or Traditional. Recommended also for Inlays, Onlays
MONOIMPLANT	PURPLE	I	For monophase impression (one step-single viscosity) for: Implant or Traditional.

ESTESIL H₂TOP™ Putty
This is a addition reaction paste for manual mixing for impression taking in polyvinylsiloxane with highly wettable surfactant hydrophilic fillers, high viscosity and with mechanical properties ideal for impression taking in the dual phase two viscosity technique (putty-wash technique).

INDICATIONS:
As a base in the dual phase two viscosity technique, of impressions for: crown, bridges, inlays, onlays and veneers.

Recommendations to use ESTESIL H₂TOP™ Putty:
Take out the same amount of base and catalyst using the special measures with the corresponding colors and mix with your fingers (approx 30 seconds) until the color looks homogeneous. Fill the tray immediately.

ESTESIL™ H₂TOP

C'est une ligne de matériaux à empreintes en polysiloxane de vinyle par addition avec matériaux de remplissage surfactants hydrocompatibles à haute mouillabilité.
Cette ligne de matériaux est disponible dans des formulations et viscosités différentes pour satisfaire les principales techniques d'empreintes.

Avertissement: Réservé à l'usage dentaire uniquement.

COMPOSITION

Base: mélange de polysiloxanes de vinyle, polysiloxanes de vinyle terminaux - H, charges inertes et pigments colorants
Catalyseur: mélange de polysiloxanes de vinyle, charges inertes et complexe organique de platine breveté.

CARACTÉRISTIQUES TECHNIQUES

ISO 4823 CLASSIFICATION

CODE TYPE	B PUTTY SOFT	Δ MONOPHASE	I MONOIMPLANT	E HEAVY	F HIGH FLOWABILITY	H EXTRA HIGH FLOWABILITY

Tear Strength	N/m	NA	8	8	9	8
Compatibility with Paris plaster	Excellent	Excellent	Excellent	Excellent	Excellent	Excellent

* Recommended total setting time 4 min. 30 Sec.

WARNINGS:

1. Talc powdered gloves or containing sulphur may interfere with the polymerization of A-silicones (or polyvinylsiloxanes). If you have used this type of gloves wash your hands with care.
2. Do not exceed in the use of surfactants because they may inhibit polymerization.
3. Astringents containing aluminum salts may inhibit the polymerization of A-silicones (or polyvinylsiloxanes).
4. Do not exchange the components in the packaging and the measures to avoid affecting the product's properties.
5. Do not use simultaneously and in mono or dual phase techniques other materials like: polyethers, polysulphurs and condensation silicones.

CONDITIONS DE STOCKAGE

Des conditions de stockage inadéquates et erronées risquent d'altérer les caractéristiques du produit et d'engendrer un dysfonctionnement ou de réduire la durée de vie des matériaux.
Les emballages de produit doivent être entreposés à l'écart de la chaleur, au sec et à une température comprise entre 10°C/50°F et 24°C/75°F. Ne pas congeler les emballages de produit.
Ne pas utiliser après la date de péremption (Expiry date).

SUGGESTIONS POUR L'ASSOCIATION DES MATERIAUX A EMPREINTES:

TYPE	COULEUR	CODE	CONSEILS D'UTILISATION
H Heavy	OCRA	E	E+F: Empreinte de précision pour préparations sur-gingivales ou juste en-dessous de la gencive dans la technique en deux temps.
HF High Flowability	BLEU	F	B+F ou Δ+F ou E+F: Empreinte de précision pour préparations sur-gingivales ou juste en-dessous de la gencive.
EHF Extra High Flowability	ROSE	H	B+H ou Δ+H: Empreinte de précision pour la lecture sous la gencive.
PUTTY SOFT	JAUNE	B	Base pour empreinte à deux temps et à deux viscosités technique putty-wash.
MONOPHASE DELTA	VERT ACIDE	Δ	Base pour empreinte à deux viscosités pour : double arcale, implant ou traditionnel. Recommandée aussi pour inlays, onlays.
MONOIMPLANT	POURPRE	I	Pour empreinte en un temps pour : implant ou traditionnel.

Suggestions for the impression removal:
Remove the tray from the oral cavity following the tooth axis; avoid to remove it on a slanted or tilted line because this may strain the material or cause imperfections.

Suggestion for disinfection:

To minimize the bacterial charge spray or immerse the impression in special solutions for addition reaction silicones, wait and observe the time recommended by the disinfectant's manufacturer. To minimize environmental impact, Tokuyama Dental recommends using a water-based solution disinfector.

INDICATIONS:

Comme base dans la technique à deux temps pour empreintes pour : couronnes, bridges, inlays, onlays et veneer.

Recommendations d'utilisation d'ESTESIL H₂TOP™ Putty:

Prélever des quantités égales de base et de catalyseur à l'aide des dispositifs de dosage avec les couleurs correspondantes et mélanger avec les doigts (environ 30 secondes) jusqu'à ce que la couleur apparaisse homogène. Remplir tout de suite le porte-empreinte.

ESTESIL™ H₂TOP

È una linea di materiali da impronta in polivinilsilossano per addizione con riempitivi surfattanti idrocompatibili ad elevata bagnabilità.

È disponibile in diverse formulazioni e viscosità, per soddisfare le principali tecniche di presa dell'impronta.

ATTENZIONE: Esclusivamente per uso Odontoiatrico.

COMPOSIZIONE

Base: miscela di polivinilsilossani, polivinilsilossani terminale - H , cariche inerti e pigmenti coloranti
Catalizzatore: miscela di polivinilsilossani, cariche inerti e brevettato complesso platinico

ESTESIL H₂TOP™ MONOPHASE Δ and MONOIMPLANT

ESTESIL H₂TOP™ 5:1 is an addition reaction impression material in polyvinylsiloxane with highly wettable surfactant hydrophilic fillers in the version with cartridge for mechanic mixing. Usable with the main impression material mixing machines, in a 5:1 ratio.

The indications are the following:

INDICATIONS:

As a base in the simultaneous two viscosity technique of impressions for: crown, bridges, inlays, onlays and veneers. Indicated for the dual arch technique.
In the monophase single viscosity of impressions for: positioning of pickups of implants, antagonists, position and functional impressions.

PREPARATION

Using the Mix Machine 5:1 cartridge proceed as follows:

1. Activate the cartridge removing the protection cap.
2. Insert the mixing device on the cartridge.
3. Fix the mixing device with the locking ring to the cartridge.
4. Insert the assembly in the special space in the mixing machine (follow the manufacturer's instructions on the use and position of the cartridges in the mixing machine).
5. Dispense about 3 cm. of material, and eliminate it, before placing it on the tray.
6. Do not remove the mixing device from the cartridge once it has been used (it acts as a protection plug).

TRAY.

For this type of technique it is possible to use any type of non perforated trays with adequate retention features, individual or semi-individual trays and for the dual arch technique.

ESTESIL H₂TOP™ Heavy, High Flowability and Extra High Flowability

Are addition reaction impression materials in polyvinylsiloxane with highly wettable surfactant hydrophilic fillers used as precision correctors. Available in different formulations to meet the requirements of the main impression taking technique. They are supplied in the cartridge version to be used with mixing guns in a 1:1 ratio.

Using the Gun Mix 1:1 cartridge proceed in the following way:

1. Insert the cartridge into the mixing gun.
2. Activate the cartridge removing the protection cap.
3. Insert the mixing cannula on the cartridge.
4. Dispense about 2/3 cm. of material, and eliminate it, before placing it in place directly with the special tips, or injecting it with special syringes used to achieve a precise application into the area where a more detailed impression taking is necessary.
5. Do not remove the mixing cannula once it has been used (it acts as a protection plug).

SUGGESTIONS FOR THE USE OF ESTESIL™ H₂TOP Heavy, High Flowability and Extra High Flowability

TYPE	FARBE	CODE	SUGGESTIONS FOR USE

ESTESIL H₂TOP™ MONOPHASE Δ and MONOIMPLANT

ESTESIL H₂TOP™ 5:1 est un matériau à empreintes en polysiloxane de vinyle par addition avec matériaux de remplissage surfactants hydrocompatibles à haute mouillabilité, dans la version cartouche pour mélange mécanique. Il peut être utilisé avec les principaux mélangeurs de matériaux à empreintes, dans un ratio 5:1.

Contraindications

1. Avoid contact with the eyes to prevent potential irritations and /or accidental damage to the cornea. In case of accidental contact with the eyes rinse with plenty of water and call a doctor.
2. Avoid contact with the skin to prevent potential irritations or cause any allergic reactions (in susceptible subjects). In case of contact with the skin remove the material and rinse with plenty of water and neutral soap. In case of sensitization or reddish rash, stop using the material and seek medical assistance.
3. Do not ingest the product. In case of accidental ingestion drink plenty of water. In general the material is not dangerous if swallowed in small quantities. Seek medical advice in case of symptoms of a different nature.

Precautions

1. **ESTESIL H₂TOP™** is intended only for dentistry, following the specific "instructions for use". Any different and/or imprudent use or and/or use not compliant with the specifications expressly provided is to be considered the dentist's sole discretion and responsibility.
2. Do not use dental materials containing hydrogen peroxide in combination with **ESTESIL H₂TOP™** because they may prevent its correct hardening.
3. Thanks to its high thixotropy and formulation, the material should be dispensed easily. DO NOT apply too much pressure to avoid affecting the extrusion of the material or breaking the packaging.

En utilisant la cartouche Mix Machine 5:1 procéder de la manière suivante:

1. Activer la cartouche en retirant le capuchon de protection.
2. Installer le mélangeur sur la cartouche.
3. Fixer le mélangeur à la cartouche avec la bague de serrage.
4. Insérer tout dans l'espace du mélangeur prévu à cet effet (suivre les consignes d'utilisation du fabricant pour ce qui concerne l'usage et le positionnement des cartouches dans le mélangeur).
5. Faire sortir environ 3 cm de matière et l'éliminer avant de placer le matériau sur le porte-empreinte.
6. Ne pas enlever le mélangeur de la cartouche après l'utilisation (il sert de capuchon de protection).

PORTE-EMPREINTE

Pour ce type de technique sont indiqués tous les porte-empreintes avec des formes de rétention adéquates, des porte-empreintes individuels ou partiellement individualisés et porte-empreintes double arcade pour la technique du mordu ("Dual Arch").

ESTESIL H₂TOP™ Heavy, High Flowability and Extra High Flowability

Ce sont des matériaux à empreintes en polysiloxane de vinyle par addition avec matériaux de remplissage surfactants hydrocompatibles à haute mouillabilité, utilisés comme correcteurs de précision. Disponibles dans des formulations différentes pour satisfaire les principales techniques de prise d'empreinte. Fournis dans la version cartouche pour être utilisés avec les pistolets mélangeurs, dans un ratio 1:1.

En utilisant la cartouche Gun 1:1 procéder de la manière suivante:

1. Insérer la cartouche dans le pistolet distributeur
2. Activer la cartouche en retirant le capuchon de protection
3. Insérer la canule de mélange sur la cartouche
4. Faire sortir de 2 à 3 cm de matière et l'éliminer avant de placer le matériau sur le porte-empreinte avec les embouts mélangeurs, ou bien injecter le matériau dans des seringues pour une application précise dans la zone où il faut recueillir des données plus détaillées.
5. Ne pas enlever la canule de mélange de la cartouche après l'utilisation (elle sert de capuchon de protection).

CONSEILS D'UTILISATION D'ESTESIL™ H₂TOP Heavy, High Flowability et Extra High Flowability

TYP	COULEUR	CODE	ANWENDUNGSHINWEISE
H Heavy	OCRA	E	E+F: Empreinte de précision pour préparations sur-gingivales ou juste en-dessous de la gencive dans la technique en deux temps.
HF High Flowability	BLU	F	B+F ou Δ+F ou E+F: Empreinte de précision pour préparations sur-gingivales ou juste en-dessous de la gencive.
EHF Extra High Flowability	ROSA	H	B+H ou Δ+H: Empreinte de précision pour la lecture sous la gencive.

ESTESIL H₂TOP™ MONOPHASE Δ e MONOIMPLANT

ESTESIL H₂TOP™ 5:1 è un materiale da impronta in polivinilsilossano per addizione con riempimenti surfattanti idrocompatibili ad elevata bagnabilità nella versione in cartuccia per miscelazione meccanica. Utilizzabile con le principali macchine per la miscelazione dei materiali da impronta, nel rapporto 5:1.

Indicazioni di seguito riportate:

INDICAZIONI:

Come base nella tecnica simultanea a due viscosità di impronte per: corone, ponti, inlay, onlay veneer. Indicato per la tecnica a doppio quadrante "Dual Arch". Nella tecnica monofase a singola viscosità di impronte per: posizionamento di pick-up di impianti, antagonisti, impronte di posizione e impronte funzionali.

PREPARAZIONE

Utilizzando la cartuccia Mix Machine 5:1 fare come segue:

1. Attivare la cartuccia rimuovendo il tappo di protezione.
2. Inserire il dispositivo di miscelazione sulla cartuccia.
3. Fissare il dispositivo di miscelazione con la ghiera di bloccaggio alla cartuccia.
4. Inserire il tutto nell'apposito spazio della macchina per miscelazione, (attenersi alle indicazioni del fabbricante per quanto riguarda l'uso e la disposizione delle cartucce nella macchina di miscelazione).
5. Far uscire 3 cm. circa di materiale, ed eliminarlo, prima di posizionarlo sul porta-impronte
6. Non rimuovere il dispositivo di miscelazione dalla cartuccia una volta utilizzato (funge da tappo di protezione).

PORTA IMPRONTA

Per questo tipo di tecnica sono indicati tutti i cucchiali non forati con adeguate forme rettangolari, porta-impronte individuali o semi-individualizzati e cucchiali per tecnica dual arch a doppio quadrante.

ESTESIL H₂TOP™ Heavy, High Flowability e Extra High Flowability

Sono materiali da impronta in polivinilsilossano per addizione con riempimenti surfattanti idrocompatibili ad elevata bagnabilità utilizzati come correttori di precisione. Disponibili in diverse formulazioni per soddisfare le principali tecniche di presa dell'impronta. Vengono forniti nella versione in cartuccia per l'utilizzo con le pistole di miscelazione in rapporto 1:1.

Utilizzando la cartuccia Gun Mix 1:1 fare come segue:

1. Inserire la cartuccia nella pistola di miscelazione
2. Attivare la cartuccia rimuovendo il tappo di protezione.
3. Inserire la canula di miscelazione sulla cartuccia
4. Far uscire 2/3 cm. circa di materiale, ed eliminarlo, prima di posizionarlo in situ direttamente con gli appositi puntali, oppure iniettandolo in apposite siringhe preposte per l'applicazione precisa nella zona dove necessita la rilevazione di maggiori dettagli.
5. Non rimuovere la canula di miscelazione dalla cartuccia una volta utilizzato (funge da tappo di protezione).

SUGGERIMENTI PER L'UTILIZZO DI ESTESIL H₂TOP™ Heavy, High Flowability e Extra High Flowability

TYPE	COLOR	CODE	SUGGESTIONS FOR USE
H Heavy	OCRA	E	E+F: Impronta di precisione per preparazioni sopragingivale o appena sotto gengiva nella tecnica bifase.
HF High Flowability	BLU	F	B+F o Δ+F o E+F: Impronta di precisione per preparazioni sopragingivale o appena sotto gengiva.
EHF Extra High Flowability	ROSA	H	B+H o Δ+H: Impronta di precisione per la lettura sotto gengiva.
